# Security –
Our Expertise

Security is a matter of trust.

Our engineers advise and support architects and clients comprehensively, from the development of the safety concept to the Project execution, right up to the acceptance of the work.

Thanks to the interdisciplinary competencies in safety and fire protection engineering, the interfaces within these disciplines are optimally coordinated.

Our range of services covers the following areas:

- Safety analyses and assessments of existing organisational structures and facilities
- Real time recording and analysis of existing structural and technical safety installations
- Holistic security concepts, including alarm organisation and intervention
- Conception and design of security control systems and operations centres
- Development of concept solutions with systems engineering of access monitoring systems, door management systems, intrusion systems and video surveillance systems
- Implementation planning and specialist construction management for all security systems
- Planning, organisation and execution of cross-system integral tests
- Conduct periodic audits
- Creating of alarm and emergency manuals
- Design, organisation and execution of alarm and evacuation exercises
- Emergency planning with analysis and evaluation of existing emergency and alarm concepts

Challenge us – together we will win!
