

Fire Protection – Our Expertise

Our fire engineers advise, plan and support architects and builders holistically - from the initial analysis and definition of the protection goals to the elaboration and implementation of the defined measures. This ensures hazards are identified at an early stage and minimises risks.

Our range of services covers the following areas:

- Creation of QS fire protection concepts (QSS1 - QSS4) including implementation measures and fire safety construction supervision
- Smoke extraction concepts including fire engineering control matrix
- Definition of technical, structural and organisational fire protection measures
- Planning, organisation and execution of mandatory and user-specific integral tests

Challenge us – together we will win!
